

Student Resource Portal - Deliverable #3

Tablet/Desktop Website

Date: 03/30/2025

Project Purpose

The UMSI Student Success team seeks to improve its web presence by designing a new website to better help students understand and locate resources available to them. The new site will feature an accessible and responsive design that works on multiple devices, a modern look and feel, and a refreshed site architecture and site content.

Our Commitment:

Deliverable #3 - Mobile website

- This will include all of the content in one or more styled html files
- This will build on the mobile first design - the default web design (CSS) is for mobile devices and smartphones
- This means that the larger screen styling will be built on top of the default/mobile screen design.

SI 339 Winter 2025 Client Proposal - Mobile Deliverable

- This website will be responsive and all content will be viewable at larger screen sizes
- This website will be fully accessible and will pass accessibility validators such as WAVE and Axe
- It will iterate on feedback given for Deliverable #2

Meets Client's Objectives

Explain how you iterated on feedback given for Deliverable #2 or how you iterated on your mobile design.

Feedback for Deliverable #2 highlighted several areas for improvement including the responsive design, which lacked a multi-column grid for larger displays, insufficiently distinct page titles, navigation issues, and an overall aesthetic that did not fully align with UM's Branding Guidelines. Additionally, initial efforts in ensuring accessibility were found lacking. In response, significant enhancements have been implemented:

Responsive Web Design (RWD): The site now utilizes a multi-column grid layout in larger viewports to better organize content and utilize space efficiently. This adjustment provides a clearer hierarchy and improves the site's usability on desktops.

CSS Enhancements for Page Titles: New CSS styles have been added to make page titles more prominent and visually distinct. This includes larger font sizes, bold text, and contrasting colors to ensure they stand out appropriately against other page elements.

Navigation Improvements: Errors in the navigation structure were corrected to ensure a more intuitive user experience. The navigation now features clearer labeling and improved interactivity, which aligns with best practices for usability.

Aesthetic Adjustments: The look and feel of the site have been refined to align more closely with UM's Branding Guidelines. This includes adjustments to the color scheme, typography, and the overall layout to present a more polished and professional appearance.

Accessibility Refinements: A comprehensive review and overhaul of accessibility features were conducted. This includes adding appropriate alt text for images, ensuring color contrast meets WCAG standards, and improving keyboard navigation throughout the site. Tools like WAVE and Axe were employed to identify and rectify issues, ensuring the site is accessible to all students, including those with disabilities.

SI 339 Winter 2025 Client Proposal - Mobile Deliverable

Explain how your design optimizes site content and images to work on larger devices such as tablets or desktops.

Include in this explanation which screen-size you designed for.

How did you ensure these updates fit their requirements of a visually appealing modern website that fits within [UM's Branding Guidelines](#)

The design for larger devices such as tablets and desktops was optimized by implementing a flexible grid system and flexible images that adjust smoothly to different screen sizes. This responsive design approach ensures that the layout and content look organized and balanced on larger screens, with adequate padding and scalable text. The site was primarily designed for a screen width of 1024px and above, which is commonly used in desktops. To ensure the updates align with UM's Branding Guidelines, the color palette, typography, and imagery were carefully chosen to reflect the university's identity while providing a modern and professional look.

Explain what your unique/challenging contribution was for Deliverable #3 that helps your clients meet their goals, but wasn't asked for in an earlier deliverable.

My unique and challenging contribution was enhancing the clarity and visibility of all links on the website. Recognizing the difficulty some users may have in identifying links that blend into the text, I ensured that each link not only stands out with high color contrast but also changes color upon hovering. This feature was important to me because I understand how critical clear navigation elements are for an inclusive user experience, ensuring that all users, regardless of their visual capabilities, can easily navigate the site.

Explain how you ensured that your site is fully accessible and usable for all students - including those with different disabilities.

Ensuring accessibility was a priority throughout the development of the website. All content has been made accessible by adhering to WCAG 2.1 guidelines, such as providing text alternatives for non-text content, ensuring sufficient color contrast, and enabling keyboard navigation throughout the site. Tools like WAVE and Axe were used to validate the accessibility of the website, and adjustments were made based on their reports to ensure that the site is usable for students with disabilities, including those who use screen readers.

SI 339 Winter 2025 Client Proposal - Mobile Deliverable

Explain how you designed your 404 page and how you decided what to put on that page to help your end-users.

The design of the 404 error page was approached with the aim to maintain user engagement even when they encounter a missing page. The page features a simple, clear message that the requested page could not be found, along with a search bar and links back to the homepage and key resources. The decision to include these elements was based on the goal to minimize frustration and provide quick pathways back to relevant content.

Project Cost for Deliverable #3 Mobile Website

[enter your responses in the table below]

Item	Hours	Price	Total
Accessibility Testing	6	\$110/hour	\$660
Accessibility Fixes	12	\$110/hour	\$1320
Navigation	4	\$110/hour	\$440
Responsive Design Work	10	\$110/hour	\$1100
Additional html & content work	7	\$110/hour	\$770
Unique Addition for Deliverable #3	5	\$110/hour	\$550
New 404 Page	3	\$110/hour	\$330
Javascript (including for footer)	2	\$110/hour	\$220
Other see below*	0	\$110/hour	0
Total Costs:			\$5390
